Size specific adsorption of proteinaceous soil colloids: dependence on cation exchange properties. Surface characteristics, such as surface charge and roughness, can profoundly affect the adsorption of proteinaceous colloids to soil surfaces. Soil colloids have been found to differ greatly in their abilities to interact with proteins. In this study, we focused on the dependence of protein adsorption on the size of the colloids. The adsorption of two proteins, ovalbumin and lysozyme, to the soils was studied using a set of three soils differing in their cation exchange capacities (CEC). The influence of the size and charge of the proteins was analyzed by a series of molecular size exclusion chromatography experiments. The protein adsorption to the soils was increased with increasing CEC, regardless of protein size. Adsorption to the soil with the highest CEC was reduced in the presence of the proteins, indicating that cation exchange is one of the mechanisms responsible for the greater adsorption of proteinaceous colloids to soils. The positive correlation between protein adsorption and soil CEC indicates that the difference in the relative affinity of protein adsorption was not related to any differences in the physical and chemical properties of the

soils. Atom-economy functionalized amine bonds in palladium-catalyzed C-H functionalization. A versatile and atom-economical palladium-catalyzed C-H functionalization of pyridines and other heterocycles is reported using amine-substituted pinacol esters. These versatile intermediates are easily obtained from protected formamides by cyclocondensation with bis(acetoxy)iodobenzene. Importantly, these am

The Dallas Cowboys officially have the number one pick in the 2019 NFL Draft. So, what do you do with the opportunity to get a franchise QB? This is where the team wants to go, so now what? The time is here, the ball is officially in Jerry Jones' court, and it's time for the conversation to begin. With the Cowboys sitting at number one in the draft, the scenario of the Cowboys selecting a quarterback is in play. With that in mind, we will lay out everything we know about the position. This would be a huge get for the Cowboys. The biggest thing for the Cowboys to do in this situation is to take the best player available at the number one spot. This is where you grab the best talent, even if it means moving down and taking a cornerback. This is how you maximize

the number one pick. This is how the Cowboys should go about acquiring a quarterback. Still, you will hear some people talk about drafting a QB and feel like they are getting left out. This is how the Cowboys should spend the number one pick. I've been saying it all offseason, and now it's time to make good on it. I want all the media, fanbases, and other followers to understand that this is how the Cowboys should do it. This is what we are talking about when we say the Cowboys are "blue 2d92ce491b
