Watch Rakht Charitra 2 Full Movie, Rakht Charitra - I hindi 720p download. I hindi 720p download. Sir, We read with interest the article on the practice of 'not-to-do' practices by the researchers in the field of healthcare. In this issue of the Indian Journal of Ophthalmology, the same authors have reported an interesting case series on 'not-to-do' practices for the treatment of uveitis. In a retrospective study, the authors have reported that the use of infliximab in the treatment of

idiopathic posterior uveitis was associated with loss of vision, and removal of the anterior chamber (acellular syndrome), secondary glaucoma, and cataract formation. \[[@ref2]\] In a prospective study, they found that it was not possible to perform serial intravitreal injections of infliximab in patients with posterior uveitis. \[[@ref2]\] These are 'not-to-do' practices in the treatment of uveitis. Cases of fungal endophthalmitis are not rare. \[[@ref3]\] The case reported by Uppal *et al.* is not an isolated case as fungal endophthalmitis is not an isolated entity. \[[@ref4]\] There are reports of fungal endophthalmitis due to *Fusarium solani*, *Fusarium oxysporum*, *Pythium insidiosum*, *Colletotrichum gloeosporioides*, *Microsporium* species, and *Trichophyton rubrum*. \[[@ref3][@ref5][@ref6][@ref7]\] Reports of *Fusarium* species causing fungal endophthalmitis, particularly in India, are very rare, \[[@ref5]\] but there have been cases of *Fusarium* endophthalmitis caused by different *Fusarium* species reported from India. \[[@ref8][@ref9]\] This is the first report of *Fusarium oxysporum* causing fungal endophthalmitis in India. *Fusarium oxysporum* is a ubiquitous opportunistic fungus. It has 2d92ce491b
